                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ર્
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a high growth methanotrophic bacterial strain, which grows on a Cl carbon substrate e.g. methane and methanol, and CC comprises a functional Embeden-Meyerhof carbon flux pathway comprising a gene coding a pyrophosphate dependent phosphofrutokinase enzyme or a 16s CC RNA. The bacterial strain is useful for the production of single cell CC protein and for the biotransformation of a nitrogen-containing compound, ce.g. ammonia, nitrate, citrite or nitrogen. It is also useful for the production of a feed product comprising a protein, carbohydrates and a CC pigment and for reducing oxygen demand, for removing nitrates and compound containing environments such as landfills, waste water treatment systems or anywhere that methane, oxygen and nitrates are present. The bacterial strain of the invention can be used as a conside with methane or methanol as a carbon source. It is also used in the production of biomass including proteins, carbohydrates and a wide converse of generating animal feeds), in production of terpenoid and caroteronid compounds, useful as pigments and as monomers in polymeric materials and in production of exopolysaccharides at high levels.

CC Sequences ABG61591-ABG61590 represent high growth methanotrophic conformal fervial strain of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

The method comprises a transformed metabolising host cell, comprising suitable levels of isopentenyl pyrophosphate and a nucleic acid molecule encoding an enzyme in the carotenoid biosynthetic pathway, under the control of regulatory sequences, and contacting the host cell with carbon substrate to produce a carotenoid compound. The method is useful for producing carotenoid compounds such as antheraxanthin and astaxanthin, by using microorganism having a nucleic acid molecule encoding enzymes in the carotenoid biosynthetic pathway and which metabolise single carbon substrates. The carotenoids have potent anti-oxidant properties useful in diet, and aquaculture elements. The carotenoids are also useful as intermediates in the synthesis of steroids flavours and fragrances and compounds for potential electro-optic applications. The present sequence is Methylomonas 16a sp. 4-diphosphocytidyl-2-C-methylerythritol kinase

                                                                                                                                                                                                                                                                                                                                                                              an isopremoid biosynthetic enzyme isolated from Methylomonas 16a. The invention is useful for obtaining a nucleic acid molecule encoding an isopremoid compound biosynthetic enzyme, and for the microbial production of isopremoid compounds. The molecules of the invention are also useful for regulating isopremoid biosynthesis in an organism and for producing recombinant organisms for producing various isopremoid compounds. The nucleic acid is also useful for feed additive, for the production of keratenoids and their derivatives, isopremoid intermediates, and as pure products useful as pigments, flavours and fragrances. The present amino acid sequence represents the Methylomonas 16a open reading frame 4 (ORF4) ychB/ispE (4-diphosphocytidyl-2-C-methylerythritol kinase enzyme) protein of the invention, as described
                                                                                                                                                                                                                                                                                                                                          Sequence

Also disclosed are the nucleic acid molecules encoding the proteins are antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABP76736-ABP81046 represent nucleic acid molecules of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes novel Escherichia coli genes (I) encoding proteins (II) designated YQFF, YHBC, YGGJ, YGBP, YCHB, YCBB, YJEB and KDTB, and genes (Ia) that encode orthologous gene products (IIa) in other microorganisms and which have antibacterial activity. Recombinant microorganisms in which expression of (I) or (Ia) can be regulated are used to identify compounds that bind to the gene products, particularly in affinity selection assays. (II) and (IIa) are used to identify, or prepare, antibodies and other proteins that bind to the gene products. Substances that bind to (II) or (IIa) are potentially useful as antibacterials for treating a wide range of infections in humans and animals. Sequences antisense to (I) and (Ia) can also be used as antibacterials. The specified genes are widely distributed in bacteria but have no close homologs in eukaryotic cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; Page 23-24; 28pp; German.

                                                                                                                                                                                                                                                                                                                                          The present sequence represents an isopentenyl monophosphate kinase (IPK polymophide. The enzyme is an isoprenoid biosynthesis stimulator. The IPK polymucleotide is useful recombinant production of IPK, as a source of probes, primers and antisense sequences and for increasing/reducing expression levels of IPK in cells, particularly of essential oil plants, so as to increase flow through the isoprenoid biosynthesis pathway, resulting in increased production of e.g. pigments, vitamins and essential oils, also to increase resistance to pests and pathogens and to improve plant strength. Mutant forms of the IPK polymucleotide can be used to express forms of IPK that are resistant to IPK-targeted herbicides, and recombinant IPK can be used to screen for antibiotics, herbicides and antimalarial agents directed against IPK.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI;

                                                                                                                                        Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    27-OCT-2000; 2000GB-0026333.

Genomic sequence for Listeria monocytogenes, useful e.g. for and prevention of Listeria and related bacterial infections, related polypeptides for treatment

WPI; 2002-010914/01.

Claim 6; SEQ ID No 2816; 192pp; French.

The present invention relates to the genome sequence of Listeria minocytogenes RGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, are antibodies, identification of L. monocytogenes and related organisms, are for biosynthesis and biodegradation, especially biosynthesis of Vitamin E12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and ۲ O

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               246
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         96
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        σ
```

ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences

Claim 4; Page 72-73; 85pp; English

biosynthetic enzyme, altered activity -

and

for

producing

gene

products having enhanced

```

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site.
                                                                                                         New nucleic acid molecule from Rhodococcus erythropolis AN12 strain, useful for obtaining nucleic acid encoding isoprenoid compound
                                                                                                                                                                                              N-PSDB; AAD48798.

The present sequence represents an isopenteryl monophosphate kinase (II polypeptide. The enzyme is an isoprenoid biosynthesis stimulator. The IPK polynucleotide is useful recombinant production of IPK, as a source of probes, primers and antisense sequences and for increasing/reducing expression levels of IPK in cells, particularly of essential oil plants, so as to increase flow through the isoprenoid biosynthesis pathway, resulting in increased production of e.g. pigments, vitamins and essential oils, also to increase resistance to pests and pathogens
                                                                                                                                                                                                      New

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and to improve plant strength. Mutant forms of the IPK polynucleotide can be used to express forms of IPK that are resistant to IPK-targeted herbicides, and recombinant IPK can be used to screen for antibiotics, herbicides and antimalarial agents directed against IPK.

```

The present sequence represents an isopentenyl monophosphate kinase (II polypeptide, The enzyme is an isopremoid biosynthesis stimulator. The IPX polynucleotide is useful recombinant production of IPX, as a source of probes, primers and antisense sequences and for increasing/reducing expression levels of IPX in cells, particularly of essential oil plants, so as to increase flow through the isopremoid biosynthesis pithway, resulting in increased production of e.g. pigments, vitamins and essential oils, also to increase resistance to pests and pathogens

source

New nucleic acid encoding isopentenyl monophosphate kinase, useful e.

ά

Example 8; Page 56-57; 62pp; English.

essential

oils

The present sequence represents an isopentenyl monophosphate kinase (IP) polypeptide. The enzyme is an isopentald biosynthesis stimulator. The IPX polymucleotide is useful recombinant production of IPX, as a source of probes, primers and antisense sequences and for increasing/reducing expression levels of IPX in cells, particularly of essential oil plants, so as to increase flow through the isopremoid biosynthesis pathway, resulting in increased production of e.g. pigments, vitamins and essential oils, also to increase resistance to pests and pathogens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  and to improve plant strength. Mutant forms of the IPK polynucleotide can be used to express forms of IPK that are resistant to IPK-targeted herbicides, and recombinant IPK can be used to screen for antibiotics, herbicides and antimalarial agents directed against IPK.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2C-methyl-D-crythritol-2,4-cyclopyrophosphate or
4-diphosphocytidyl-2C-methyl-D-crythritol-2-phosphate, or their salts
are useful for screening for inhibitors of the biosynthesis of
isoprenoids. Herbicide resistant enzymes can be used as genetic markers
in any cell that is normally sensitive to the inhibitory effects of
herbicide formation. Methods from the present invention can be used to
produce herbicide resistant enzyme variants which can be incorporated
into plants to confer selective herbicide resistant on the plants. The
methods are also useful for controlling weed by cultivating crops
containing herbicide-resistant genes in the presence of weed-controlling
effective amounts of herbicides. The inhibitors are used for inhibiting
the biosynthesis of isoprenoids in plants, bacteria or protozoa. The
present sequence represents the Arabidopsis thaliana ychB protein without
leader sequence, which is given in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes functional enzymes (I) which operate in the alternative isoprenoid pathway downstream from 2C-methyl.D-erythritol-4-phosphate. (I) can be used as isoprenoid biosynthesis inhibitor. The enzymes are useful for screening a chemical library for inhibitors of the biosynthesis of isoprenoids.
                                                                                                           03-AUG-2000;
                                                                                                                                               15-FEB-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the alternative isoprenoid pathway downstream from 2C-methyl-D-crythritol-4-phosphate. (I) can be used as isoprenoid biosynthesis inhibitor. The enzymes are useful for screening a chemical library for inhibitors of the biosynthesis of isoprenoids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Enzymes which operate in the alternative isoprenoid pathway downstream from 2C-methyl-D-erythritol-4-phosphate, useful for screening a chemical library for inhibitors of the biosynthesis of isoprenoids -
